ACTICO Cloud Services

Create and deploy decision based applications with
ACTICO Platform-as-a-Service (PaaS).

actico
Smarter Decisions

Benefits

- Secure cloud service, certified ISO 27001.
- Reduce the running and upkeep costs of an in-house IT system.
- Rapid software deployment and delivery.
- Greater security through centralized data management, automatic backup services and secure web encryption.
- Ongoing support for software and services provided.

Cloud-based decision automation

ACTICO Cloud Services helps you capture, automate and manage rules-based business decisions – all hosted and managed in a virtual private cloud. It removes the complexity and cost associated with the running and upkeep of an in-house IT system. As a result, there is no need to purchase and maintain servers, computer rooms, implement back-up tasks or expensive data security systems. With ACTICO Cloud Services, this is all managed for customers in a virtual private cloud.

With the help of ACTICO Cloud Services, organizations are able to instantly deploy newly built rules, decisions and applications on their scalable ACTICO Cloud Services environments. Moreover, ACTICO Cloud Services provides integration capabilities regarding diverse systems with the help of web services.

Robust disaster recovery and backup services ensure your information is protected against the threat of unforeseen events and ready to restore to working order in the event of an emergency. Accessing the ACTICO Platform-as-a-Service (PaaS) or ACTICO Solutions (SaaS) in the cloud allows organizations to benefit from a secure and accessible platform that integrates with existing enterprise systems to support effective resource management.

ACTICO Cloud System Infrastructure

Cloud System Infrastructure

ACTICO offers you strategic applications and a platform in an infrastructure that has been set up and managed for you.

ACTICO Cloud Services are based on a highly reliable and scalable architecture. This enables customers to maximize uptime and allows for zero data loss. Customer production data is replicated across three geolocations within a customer selected region. A geolocation is defined as a completely separate data-center location within a region.

Customers are separated from each other through distinct and separated infrastructure. Providing for each customer's environment dedicated computing, network and storage resources allowing scalability and elasticity.

All customers' environments are part of their virtual private cloud. These are isolated and secured with own subnets and security groups. Traffic and requests are served to these environments over a highly redundant and performant load balancing facility. A VPN connectivity between the cloud and on-premises environments enables enterprise connectivity, data exchange and secure computing.

Data storage is performed by highly available and cost-effective databases and cloud storage. All cloud resources are provided in a secure, automated way using state-of-the-art tooling and automation: container technology and infrastructure as code (IaC) to increase operator productivity and transparency.

Application & Operational Support

With ACTICO Cloud Services, all hosting, infrastructure and system management tasks are managed by ACTICO. This includes activities around:

- Development and deployment of all patches, bug fixes and minor and major software releases.

- Management and renewal of software licenses used under ACTICO Cloud Services.

- Access to the ACTICO Cloud Service help desk.

- 24 x 7 monitoring of availability and software uptime.

- Data recovery and backup services.

- High performance, reliability and availability with set SLAs.

Targeted to financial institutions and companies that focus on their core activities, ACTICO Cloud Services are a managed production offering that combines licenses and services, removing the need for organizational CAPEX planning and approval. It is the preferred deployment solution for organizations seeking to mobilize their workforce operations and resource capabilities through a secure, cloud-accessed software service.
